

When a user signs in, sign in is successful and I get an access token

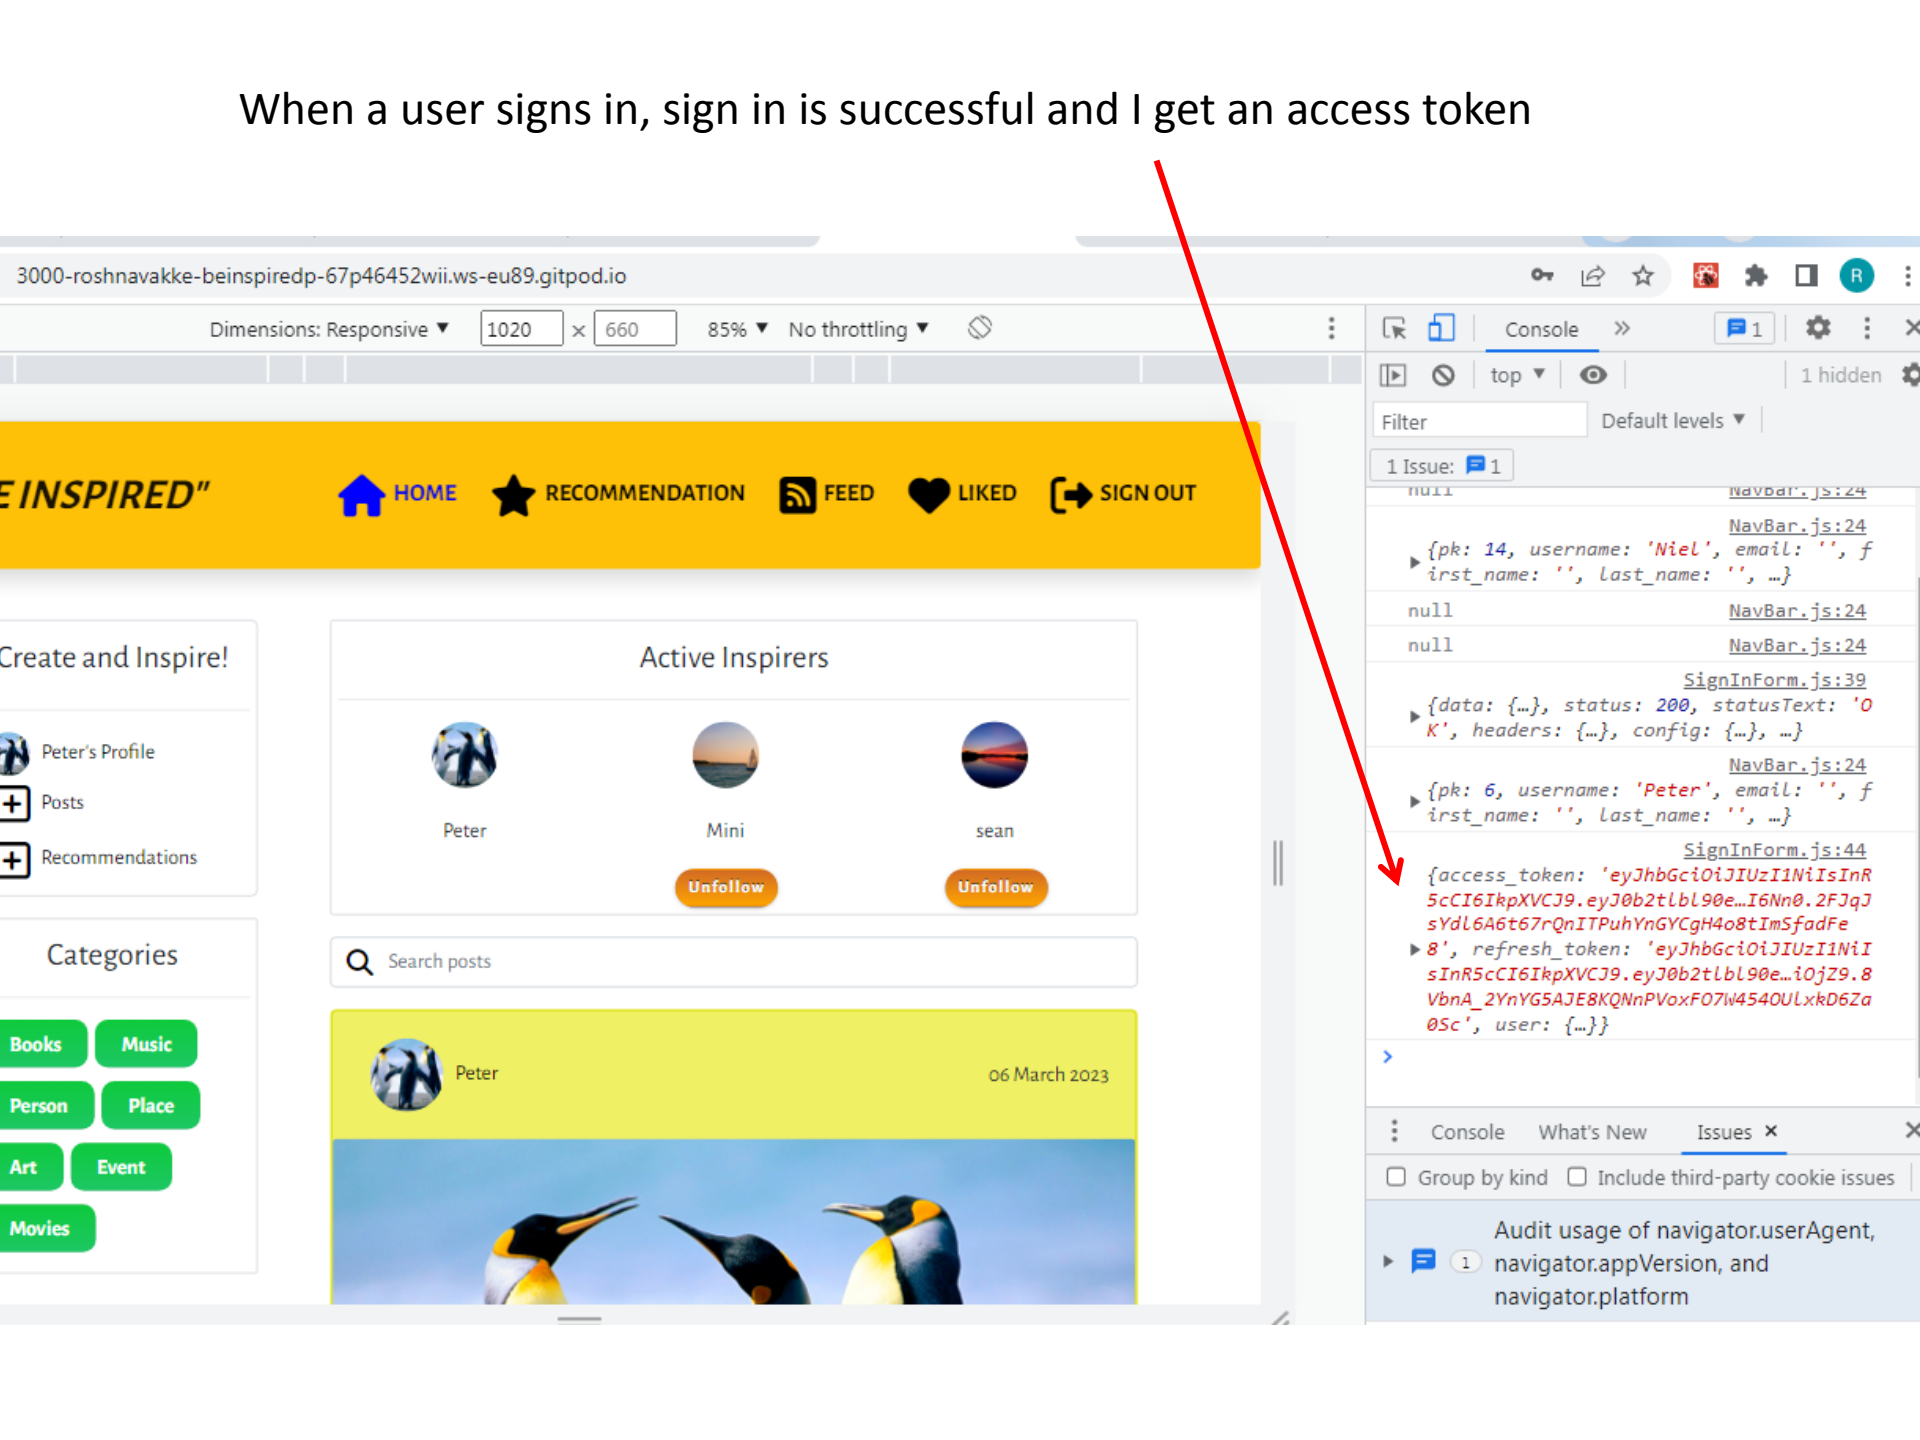

The screenshot displays a web browser window with a URL bar showing a local development environment. The browser's developer tools are open, showing the console with a log message indicating a successful sign-in. The log message includes an access token and a refresh token. A red arrow points from the text "When a user signs in, sign in is successful and I get an access token" to the access token in the console log.

The web application interface shows a yellow header with navigation links: HOME, RECOMMENDATION, FEED, LIKED, and SIGN OUT. The main content area displays "Active Inspirers" with profiles for Peter, Mini, and sean. Below the profiles, there is a search bar and a post by Peter dated 06 March 2023.

The developer console shows the following log message:

```
{pk: 6, username: 'Peter', email: '', first_name: '', last_name: '', ...}
```

The console also shows the response from the sign-in endpoint, which includes an access token and a refresh token.

## Console upon signing out shows object = null

The screenshot displays a web browser window with the URL `3000-roshnavakke-beinspiredp-67p46452wii.ws-eu89.gitpod.io`. The website has a yellow header with the text "BE INSPIRED" and navigation links for "SIGN UP" and "SIGN IN". The main content area features a lantern image, a welcome message, and two buttons: "New? Come Join us!" and "Member? Sign In and Start!".

The browser's developer console is open, showing several log entries. A red arrow points to a specific error message:

```
Unchecked runtime.lastError: A listener indicated an asynchronous response by returning true, but the message channel closed before a response was received
```

This error is associated with the file `3000-roshnavakke-bei...s-eu89.gitpod.io/:1`. Other log entries show `null` values and successful API responses from `SignInForm.js:39` and `SignInForm.js:44`.

At the bottom of the browser window, a status bar indicates the time as 12:45 on 07-03-2023.

But upon page refresh, the logged in page returns and console shows 401 error and previous user's sign in details. Also refreshTokenTimeStamp is missing. Plus pages operate normally.

The screenshot shows a web application interface with a yellow navigation bar containing links: HOME, RECOMMENDATION, FEED, LIKED, and SIGN OUT. Below the navigation bar, there's a section titled "Active Inspirers" with three user profiles: Peter, Mini, and sean. Each profile has an "Unfollow" button. Below this is a search bar labeled "Search posts" and a post by Peter dated "06 March 2023" featuring a photo of penguins.

The browser's developer console shows a 401 error (Unauthorized) for a GET request to `https://be-inspired-drf-api.herokuapp.com/dj-rest-auth/user/`. The error message is `(Unauthorized)`. The console also shows a log message: `[HMR] Waiting for update signal from WDS...`.

A red arrow points from the text "refreshTokenTimeStamp is missing" to the console error. Another red arrow points from the text "previous user's sign in details" to the storage inspection overlay.

The storage inspection overlay shows the following structure:

Key	Value
pk	6
username	'Peter'
email	''
first_name	''
last_name	''
